

Relax Far Infrared Sauna

The Quality Sauna -- Feel it in 30 seconds !

What to look for when you want a Quality Far Infrared Sauna ?

Look at the source of what generates FIR Energy in an Infrared Sauna.

The Relax Sauna Radiator uses Semi-Conductor Chip Technoogy, which separates the Relax Sauna from other "Infrared" Saunas.

Carbon or ceramic emitters are limited by Planck's Law, which makes it pretty much impossible for more than 50% of the energy emitted to be Far Infrared.

The Relax Sauna Generator emits over 95% Pure Far Infrared

In Japan, there is a legal definition of a far infrared sauna. You have to be at least 95% to be called a Far Infrared Sauna. This is why other "infrared" saunas cannot be called Far Infrared Saunas in Japan. Only the Relax Far Infrared Sauna can.

Only Far Infrared Energy Pulsates & resonates with your Water Molecules. (Near Infrared Does Not)

The Relax Sauna folds easily, and fits into a compact carrying bag.

The patented Relax Semi-conductor chip is a breakthrough in Technology,

The Relax Sauna semi-conductor chip transforms electricity into over 95% pure far infrared energy. Only Far Infrared Light energy penetrates deeply into the human cell and resonates with the water molecules. Only Far Infrared Energy Pulsates your Water Molecules

Near Infrared Energy DOES NOT Pulsate the Water Molecules.

All rocks and metals, etc. reflect far infrared light when either heated or when exposed to sunlight. Without computer technology, It is pretty much impossible to generate much more than 20 - 60% FIR energy. Semi-Conductor Chip technology gives Pure Far Infrared.
